

Falling Detection on Raspberrypi

Speaker : Tse-Yu Chen

Advisor : Prof. Tong-Yu Hsieh

Human Pose (1/2)

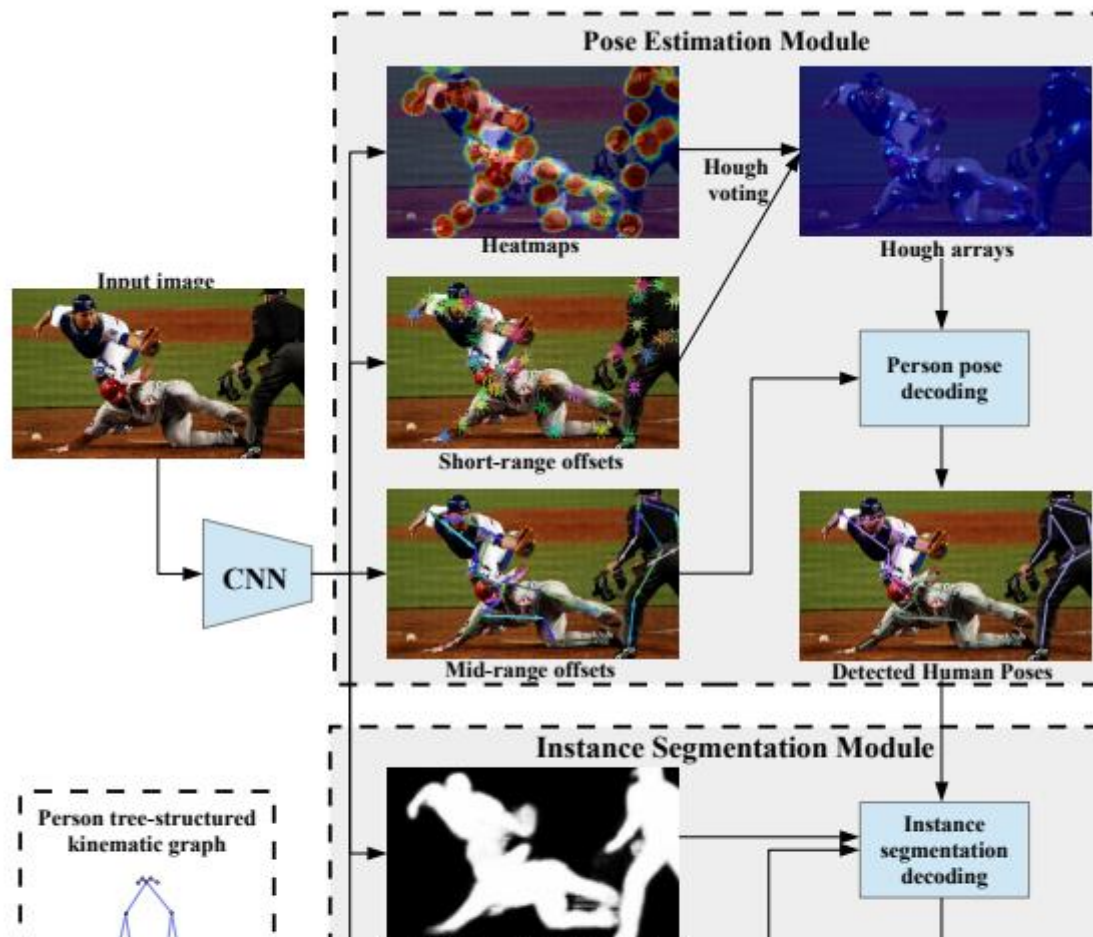

Human Pose (2/2)

0	Nose	9	Left wrist
1	Left eye	10	Right wrist
2	Right eye	11	Left hip
3	Left ear	12	Right hip
4	Right ear	13	Left knee
5	Left shoulder	14	Right knee
6	Right shoulder	15	Left ankle
7	Left elbow	16	Right ankle
8	Right elbow	Total	17

PoseNET (1/5)

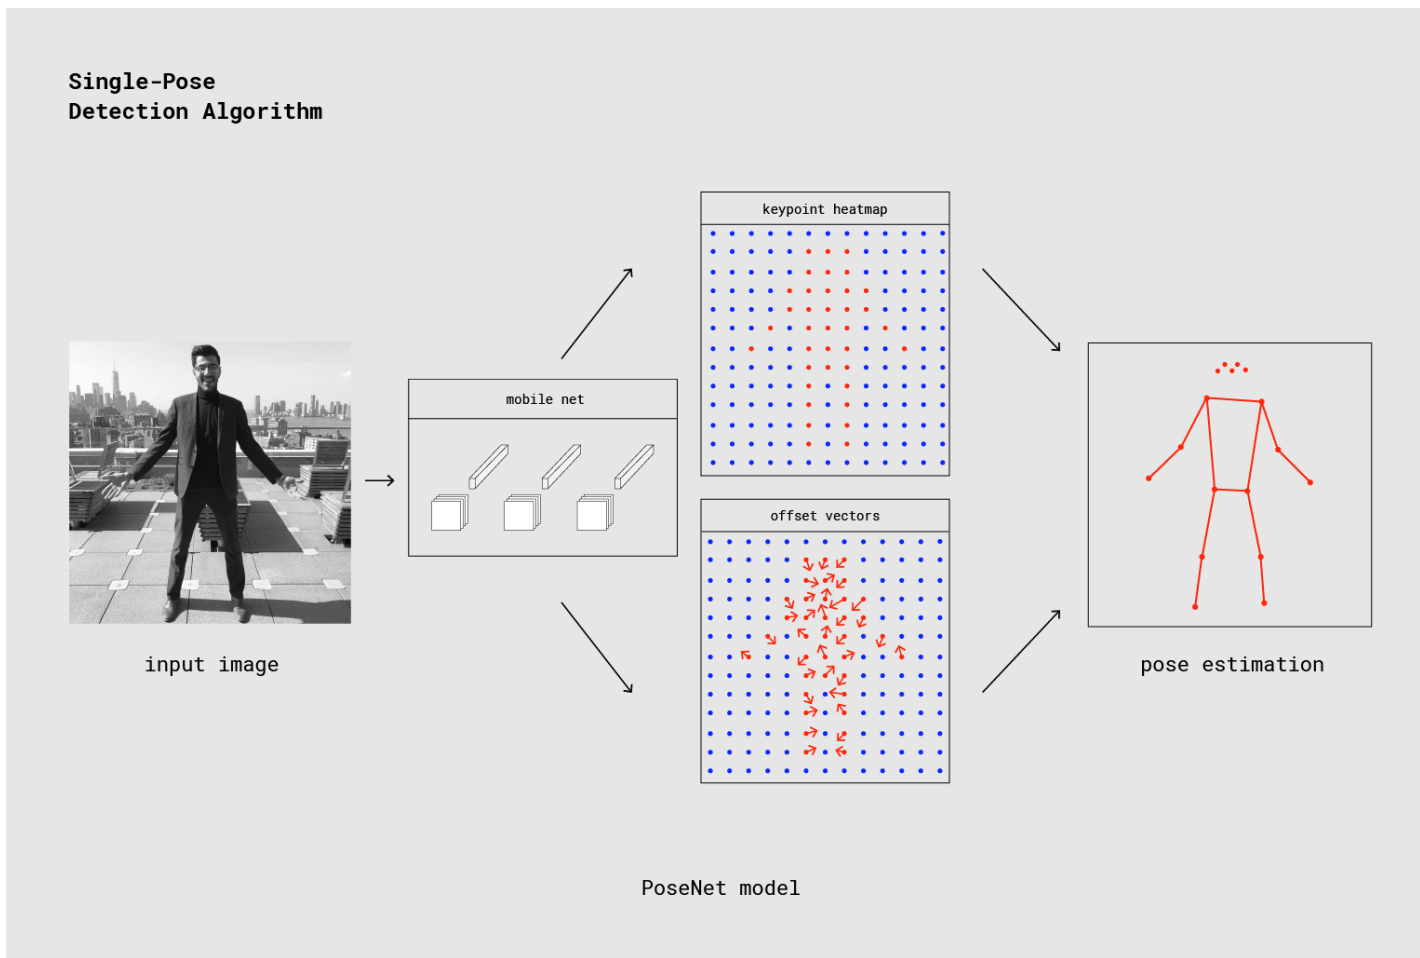

[1] G. Papandreou et al. "Towards Accurate Multi-person Pose Estimation in the Wild," *2017 IEEE Conference on Computer Vision and Pattern Recognition (CVPR)*, pp.3711-3719, 2017

[2] G. Papandreou et al. "PersonLab: Person Pose Estimation and Instance Segmentation with a Bottom-Up, Part-Based, Geometric Embedding Model", *2018 European Conference on Computer Vision(ECCV)*, 2018

PoseNET (2/5)

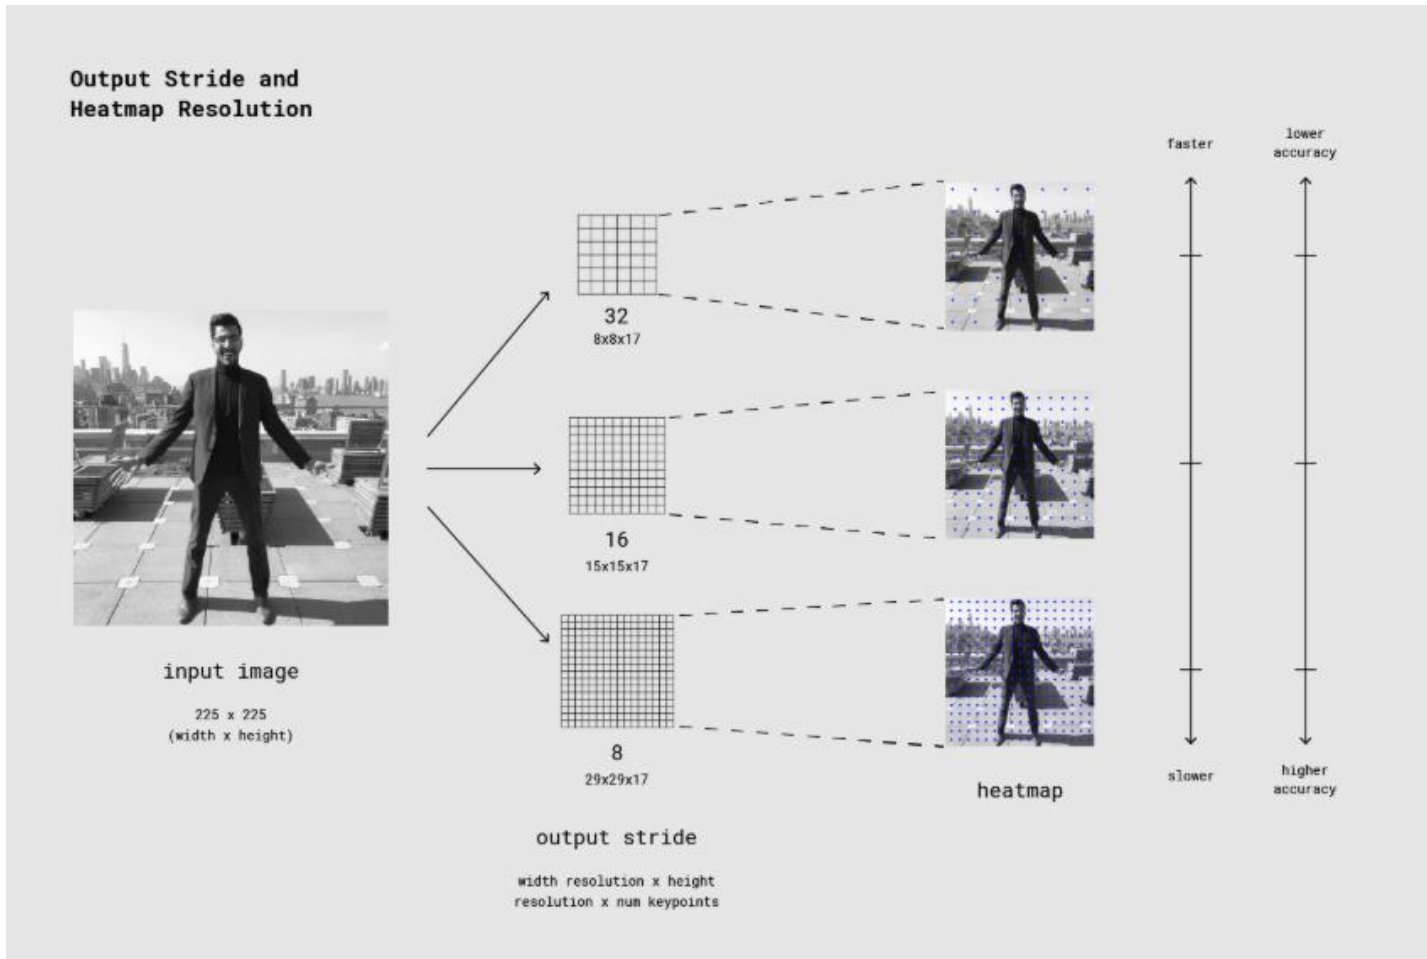

■ Keypoint and Vector

PoseNET (3/5)

■ Stride Num -> accuracy and speed

PoseNET (4/5)

- Try it yourself !
 - PoseNet Online (need camera)
<https://storage.googleapis.com/tfjs-models/demos/posenet/camera.html>
 - Google Play:
PoseNet Broadcast

PoseNET (5/5)

- **Architecture**
 - MobileNetV1 v.s. Resnet50
- **Method**
 - SinglePose v.s. MultiPose
- **Output Stride**
 - 8 v.s. 16
- **Multiplier (only for MobileNetV1)**
 - 1.0, 0.75, 0.5

Check Your Setting

- Check your **tensorflow** and **opencv(cv2)** module
- If you miss any module, do the “dev install” commands in previous handout again.

```
pi@raspberrypi: ~/abc/tflite1/course
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ ^C
pi@raspberrypi:~/abc/tflite1/course $ python3
Python 3.7.3 (default, Jul 25 2020, 13:03:44)
[GCC 8.3.0] on linux
Type "help", "copyright", "credits" or "license" for more information.
>>> import tensorflow as tf
>>> tf.__version__
'2.0.0'
>>> import cv2
>>> cv2.__version__
'3.4.6'
>>> █
```

Download Demo Code

1. **wget**
"https://drive.google.com/u/0/uc?id=1o2Sg8t3jQDJzklai4H_gtl4L1UH_p1Fr&export=download"
-O course.zip
2. **unzip course.zip**

wget "TheLinkYouWantDownloadFrom" -O save_name

Fall Detection (1/6)

■ Use Case

Fall Detection (2/6)

- Utilize the variation of different checkpoints to judge whether the “FALL” situation is happening or not.

Fall Detection (3/6)

- The “argparse” library enables user to change your argument by user define command.

```
# Define and parse input arguments
parser = argparse.ArgumentParser()
parser.add_argument('--graph'      , help='Name of the .tflite file, if different than detect.tflite'      , default='posenet_
parser.add_argument('--threshold' , help='Minimum confidence threshold for displaying detected objects', default=0.5)
parser.add_argument('--image'      , help='Name of the single image to perform detection on. To run detection on multiple
#把指令的內容傳送給各個參數
args = parser.parse_args()
GRAPH_NAME = args.graph |
min_conf_threshold = float(args.threshold)
IM_NAME = args.image
```

- You can set default case by adding “default=XXX” into the function.

Fall Detection (4/6)

- The “Interpreter” library enables user to load the data from pretrained model (tflite).

```
# Path to .tflite file, which contains the model that is used for object detection
PATH_TO_CKPT = os.path.join(CWD_PATH, GRAPH_NAME)
interpreter = Interpreter(model_path=PATH_TO_CKPT)
interpreter.allocate_tensors()
#print(PATH_TO_CKPT)
#####
# Get model details
input_details = interpreter.get_input_details()
output_details = interpreter.get_output_details()
height = input_details[0]['shape'][1]
width = input_details[0]['shape'][2]
floating_model = (input_details[0]['dtype'] == np.float32)
```

Fall Detection (5/6)

- **Heatmaps (9,9,17)** : probability of each keypoint in the 9x9 coordinate of image
- **Offset vectors (9,9,34)** : used for more exact calculation of the keypoint's position

Fall Detection (6/6)

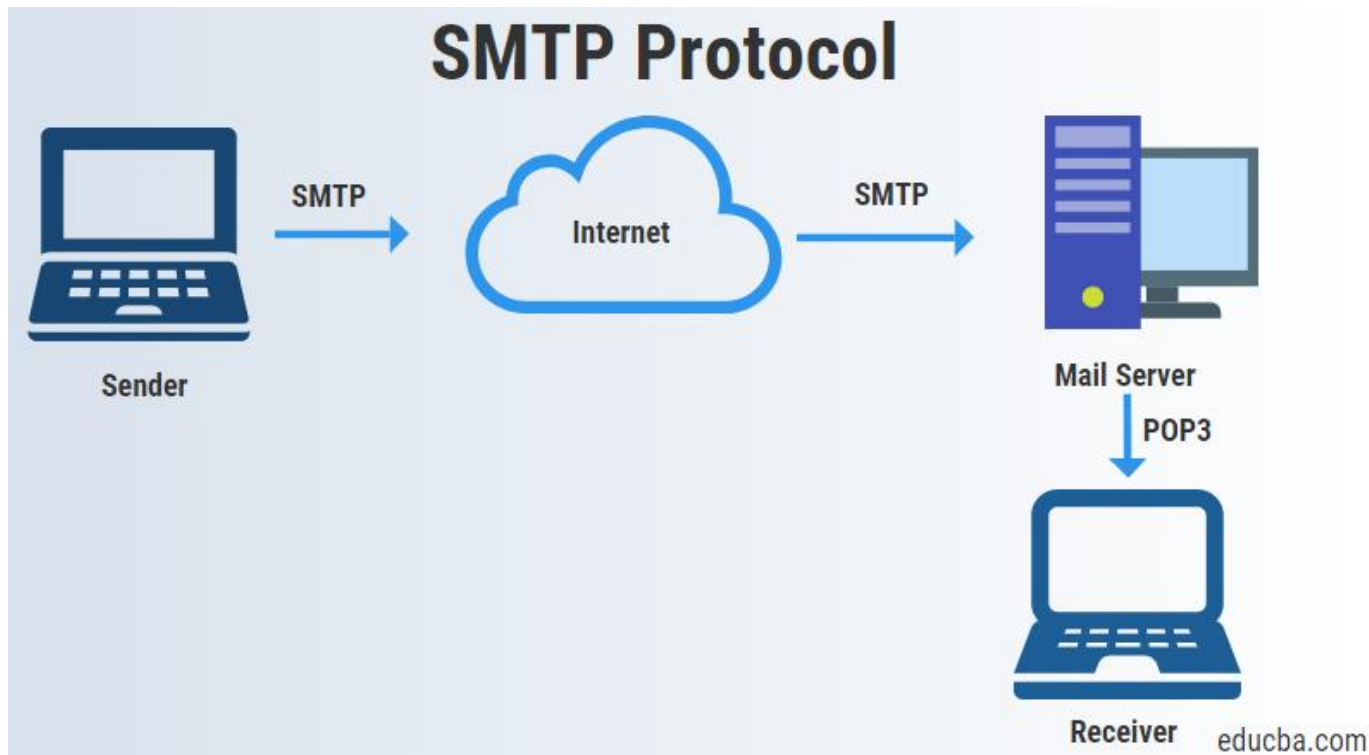

```
pi@raspberrypi:~/abc/new/course $ python3 image.py --image
=testwalk.jpg

SMTP (3/3)

← 低安全性應用程式存取權

某些應用程式和裝置採用的登入技術安全性較低，將導致您的帳戶出現安全漏洞。建議您停用這類應用程式的存取權；當然，您也可以選擇啟用存取權，但請瞭解相關風險。如果您並未使用這項設定，Google 會自動關閉該權限。[瞭解詳情](#)

允許低安全性應用程式：已開啟
